Validated Analytical Result Tables

Kelley,

Attached are the three validated analytical reports (HW#: 32, 35, 47) that contain results greater than both the trigger levels and the National Drinking Water Standards (MCLs). HW-32 contains a result greater than the Arsenic MCL (10 ug/L). HW-35 contains a result greater than the Lead MCL (15 ug/L). HW-47 contains a result greater than the Arsenic MCL. These reports are examples of what we can do. I can add other columns as necessary such as a units column in relation to the Trigger Levels. Right now anything that is highlighted yellow are results greater than the trigger level. I can also create something that will highlight a result that is greater than the MCL if you wish. Currently, I have a total of 15 residents that have analytical data greater than the trigger level. These residents are HW#: 02, 04, 06, 12, 15, 18, 19, 24, 25, 26, 29, 31, 32, 35, and 47. This only reflects the data that has been entered into SCRIBE as of yesterday morning.

Please let me know if there are any changes that you wish to make to these analytical reports.

Thanks,
